TODAY'S AGENDA

- 01 Duo Bahlul Landscape
- 02 Content Context
- 03 Comment & Sentiment Analysis
- 04 Key Findings (Data POV)
- 05 Actionable Recommendations

Duo Bahlul Landscape

During 2026, Duo Bahlul experienced a >5,000% search breakout, mostly driven by the host's personal amplification and other social media ecosystems (TikTok clips and Instagram Reels).

Content Calendar Aligned with Search Season

The Ramadan video cluster (Feb–Mar 26) coincides with the gradual rise in search index, indicating production was timed with seasonal momentum, which can boost search trends

Breakout Triggered by an External Factor

The video released right within the breakout window (Apr 27) performed only averagely (9,667 views/day) — the search spike was likely triggered by an external factor (a viral third-party TikTok clip).

Timing ≠ a Performance Driver

Correlation between search index at publish time and video performance is very weak ($r=0.201$). The "Demi Sania" case study proves it — ranked #3 of 51 videos despite releasing well before search momentum formed. Guest & topic selection is what drives audience interest.

Source data: Google Trends (2025 – 2026), YouTube API

Content Context: Eps "DEMI SANIA, COWOK RELA PINDAH AGAMA?!"

This episode broke out because it paired a trending guest with a light-controversial topic, a pattern worth repeating in future casting decisions.

- 1

Type of Content

A regular Podcast Bahlul episode, hosted on NOICE's main YouTube channel, consistent with a multi-content hosting strategy within one large subscriber base.
- 2

What Drove the Spike

Sania Leonardo was cast as a guest while her personal narrative was already trending on TikTok, an indication that guest selection factored in buzz that had already formed externally on social media.
- 3

Results That Matter

Solid performance (rank #3 of 51) supports channel engagement & watch-time metrics; the explicit CTA in the description shows an orientation toward interaction/comments, relevant to community growth.
- 4

Implications for Future Strategy

The "trending guest + light-controversial topic" pattern could be turned into a more systematic guest & topic selection criterion.

Avg Views / day
(Ranked #14 of 51)

Comment & Sentiment Analysis

This video's audience is dominated by positive sentiment (57.5%), and even the single negative comment is constructive rather than hostile. What's more interesting: 41.6% was classified as request asking Sahil, Kamal, and Sania to make their trio content permanent. This is a strong signal that the audience isn't just satisfied — they actively want this collaboration to continue.

SENTIMENT BREAKDOWN (SAMPLE n=20)

Positive Comment

DISCUSSIONS THAT EMERGED

- ### 1. Request (41.6%)

Dominant ask, form a permanent trio/channel (1,008 likes), add guests Dafa Ariq & Umi Quarry (115 likes), make a special Ramadan episode (24 likes)
- ### 2. Other (31.5%)

Mostly observational/meta comments, content format ("20% info, 80% comedy" [orig. "20% informasi, 80% lawak"], 499 likes), host's resemblance to other public figures (334 likes)
- ### 3. Praise (24.6%)

Trio chemistry & memorable quotes (e.g. Kamal's advice "don't ever put things off" [orig. "jangan menunda"], 461 likes)
- ### 4. Criticism (2.3%)

Just 1 comment. asking to tone down the rough language, delivered with an appreciative tone ("that was so much fun" [orig. "udah seru banget"])

Key Findings

Main insights from benchmarking 51 Duo Bahlul videos

22% vs. lowest

Production Allocation vs. Performance Gap

Ramadan/Religious-Special is the 2nd most produced (11 videos), yet performs the lowest.

22K Views/day

Conflict/Drama Consistently Outperforms by Title & Topic

The Conflict/Drama category records the highest average views/day & like ratio (2.0%) among 5 other categories. The "Demi Sania" case study video falls under the category related to **Relationship/Household**.

*"Views/day = average (total views ÷ video age), not actual daily data"

CORRELATION ANALYSIS

r = 0.16

Duration Isn't a Performance Driver

Correlation between duration and performance is very weak. 30-minute and 80-minute videos are equally likely to perform high or low.

r = 0.201

Timing Isn't a Performance Driver

Correlation between search trend index at publish time and performance is very weak. The "Demi Sania" case study ranks #3 of 51 despite releasing well before search momentum formed, guest & topic selection is what matters, not timing.

Actionable Recommendations

QUICK WINS (easy to execute, fast impact)

Execute follow-up content the audience is directly requesting

Based on: Request is the dominant theme (41.6%) among the most-engaged comment, not an assumption, but an explicit ask.

Impact: The idea is already validated by the audience itself, low risk, high engagement potential (e.g. trio collab, specific guests).

Prioritize releasing Conflict/Drama content when search interest is high

Based on: This category consistently outperforms (22K views/day); external momentum is most effective when the category is right.

Impact: Maximizes the search trend spike by matching it with high-performing content.

Stop optimizing based on video duration

Based on: Correlation between duration and performance is very weak ($r=0.16$), short and long videos perform equally well.

Impact: Reallocate production/editing time to higher-impact work (content, guest selection).

STRATEGIC (needs more planning)

Optimize the Seasonal Content Formula (Case: Ramadan Content)

Based on: Because it's seasonal (appearing only during Ramadan), its production share is naturally limited and not fully apples-to-apples against other categories' year-round volume.

Impact: Adopt elements from the Conflict/Drama category, like narrative tension or light conflict, into the Ramadan content format.

Build a Guest & Topic Evaluation Playbook

Based on: The "Demi Sania" success pattern shows that pairing a guest who already has external reputation/buzz with a topic packaged as light-controversial consistently drives high performance.

Impact: Consistent performance across videos, no longer dependent on luck or intuition alone.

Strengthen cross-platform distribution strategy (TikTok clips)

Based on: The search breakout was driven by the third-party clip ecosystem & the host's personal amplification, not official channels.

Impact: Greater control over viral momentum instead of passively waiting for organic clips. (E.g.: hire a dedicated TikTok clip creator to boost audience awareness.)

THANK YOU
